1. A system comprising:
a client computer to playback multimedia content and annotations
corresponding to different temporal portions of the multimedia content; and
an annotation server, coupled to the client computer, to,
maintain an annotation database having a plurality of annotations
corresponding to the multimedia content,
provide the plurality of annotations to the client computer for
playback,
send electronic mail messages including annotations to recipients
identified by the client computer,
generate new annotations based on received electronic mail
messages, and
add the new annotations to the annotation database.

sub-17

2. A system as recited in claim 1, further comprising a media server to
manage streaming the multimedia content to the client computer.

3. A system as recited in claim 1, further comprising a network coupling
the client computer to the annotation server.

1 4. A system as recited in claim 1, wherein the client computer is further
2 to:

3 present an electronic mail message including a multimedia content
4 identifier to a user,

5 receive a user selection of the multimedia content identifier,

6 access a media server to obtain the multimedia content, and

7 playback the multimedia content to the user.

8
9 5. A system as recited in claim 4, wherein the client computer is further
10 to transmit, to the media server, an identifier of a temporal segment of the
11 multimedia content, and wherein the media server is to stream to the client
12 computer the multimedia content beginning with the identified temporal segment.
13

14 6. A method comprising:

15 presenting, to a user, a user interface allowing the user to create a new
16 annotation corresponding to media content; and

17 including, as part of the user interface, a field via which the user can
18 identify a recipient that is to receive an electronic mail notification of the new
19 annotation.
20

21 7. A method as recited in claim 6, further comprising forwarding the
22 new annotation to an annotation server to transmit the electronic mail notification
23 of the new annotation to the recipient.
24
25

1 12. One or more computer-readable memories containing a computer
2 program that is executable by a processor to perform the method recited in claim
3 6.

4
5 13. A method comprising:
6 receiving data for a new annotation corresponding to a temporal range of
7 media content;
8 generating an electronic mail message including both the content of the
9 new annotation and an identifier of the media content; and
10 forwarding the electronic mail message to a recipient identified by the data.

11
12 14. A method as recited in claim 13, wherein the generating further
13 comprises including, in the electronic mail message, an identifier of the new
14 annotation.

15
16 15. A method as recited in claim 13, wherein the generating further
17 comprises including, in the electronic mail message, an identifier of the temporal
18 range of media content.

19
20 16. One or more computer-readable memories containing a computer
21 program that is executable by a processor to perform the method recited in claim

22 13.

Sub

C4

17. A method comprising:
receiving an electronic mail notification of a new annotation corresponding
to media content, the media content having a plurality of temporal segments;
presenting the electronic mail notification to a user;
receiving a user input to access the media content; and
accessing, upon receiving the user input, a media server to stream one of
the plurality of segments that corresponds to the new annotation to the user.

13
18. A method as recited in claim 17, wherein the presenting comprises
displaying annotation content for the new annotation to the user.

Sub
06

19. A method as recited in claim 17, wherein the presenting comprises:
displaying annotation content for the new annotation to the user; and
displaying at least one identifier to the user, the at least one identifier
including one or more of:

a content identifier that identifies the media content;
a range identifier that identifies a temporal range of the segment
corresponding to the new annotation;
an annotation identifier that identifies the new annotation; and
an annotation set identifier that identifies one or more annotation
sets that the new annotation is part of.

20
20. A method as recited in claim 19, wherein the content identifier
comprises a uniform resource locator (URL).

Sub C5
21. A method as recited in claim 17, wherein the receiving a user input comprises receiving a user selection of a uniform resource locator (URL) of the media content.

17
22. A method as recited in claim 17, wherein the receiving a user input comprises receiving a user selection of an identifier of the annotation.

Sub A7
C6
23. One or more computer-readable media having stored thereon a computer program that, when executed by one or more processors, causes the one or more processors to perform functions including:

receiving an electronic mail notification of a new annotation corresponding to media content, wherein the electronic mail notification includes a user-selectable identifier of the media content;

displaying the electronic mail notification;

receiving a user selection of the identifier; and

accessing, upon receiving the user selection, a media server indicated by the identifier to begin streaming the media content for presentation to the user.

19
24. One or more computer-readable media as recited in claim 23, wherein the user-selectable identifier comprises a uniform resource locator (URL) that identifies a server and a location at the server where the media content is located.

Sub
08
C1

25. A system comprising:

an interface module to receive data regarding a new annotation corresponding to media content;

a module to generate an electronic mail message regarding the new annotation, the electronic mail message including,

the new annotation content, and

an identifier of the media content to which the new annotation corresponds.

09396701-091560
SUBST 60" TO 296E60

26. A system as recited in claim 25, wherein the electronic mail message further includes an identifier of the temporal range of the media content that the new annotation is associated with.

27. A system as recited in claim 25, wherein the electronic mail message further includes a unique identifier of the new annotation.

28. A system as recited in claim 25, wherein the electronic mail message further includes an identifier of one or more annotation sets that the new annotation is associated with.

29. A system as recited in claim 25, wherein the system comprises an annotation server computer.

24 30. A system as recited in claim 25, wherein the system comprises a client computer and wherein the interface module comprises a user interface.

31. A method comprising:
receiving an electronic mail notification of an annotation corresponding to media content; and
replying to the electronic mail notification to generate a new annotation corresponding to the media content.

32. A method as recited in claim 31, wherein the replying includes:
obtaining, from the electronic mail notification, an identifier of the annotation; and
including the identifier of the annotation in the reply.

33. A method comprising:
receiving an electronic mail thread including a plurality of electronic mail messages;
creating an annotation from at least one of the electronic mail messages;
and
adding the annotation to an annotation database.

34. A method as recited in claim 33, wherein the creating comprises creating a single annotation including each of the plurality of electronic mail messages.

281
35. A method as recited in claim 33, wherein:

the creating comprises generating, for each of the plurality of electronic mail messages, an annotation; and

the adding comprises adding each of the generated annotations to the annotation database.

281
36. A method as recited in claim 33, further comprising locating, in the electronic mail thread, an identifier of media content that the annotation corresponds to.

37. One or more computer-readable media having stored thereon a computer program that, when executed by one or more processors, causes the one or more processors to perform functions including:

receiving an electronic mail message; and

extracting both annotation content and annotation identification information from the electronic mail message.

38. One or more computer-readable media as recited in claim 37, wherein the computer program further causes the one or more processors to perform functions including:

creating a new annotation based on the extracted annotation content and the annotation identification information; and

adding the new annotation to an annotation database.

090701-0915

11. A method as recited in claim 6, further comprising:
presenting, as part of the user interface, a default set of recipients to receive
the electronic mail notification.

Sub
37
C10

39. One or more computer-readable media as recited in claim 37,
wherein the extracting annotation identification information comprises extracting
from the email message:

an identifier of media content to which the annotation content corresponds
and of a temporal segment, corresponding to the annotation content, of the media
content; and

an identifier of an annotation set that a new annotation including the
extracted annotation content is to be part of.
